Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,
OSBORNE SPERRY DENTAL LAB INC (Continued)

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA
program staff to track the notification, permit, compliance, and
corrective action activities required under RCRA.

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110005321990

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
MACRO TECHNOLOGIES LLC (Continued) 1001969475

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

Facility address: 12221 120TH AVE NE
KIRKLAND, WA 98034
EPA ID: WAD988482287
Mailing address: PO BOX 42121
PORTLAND, OR 97055
Contact: MARCUS YOUNG
Contact address: 3800 SE 22ND AVE
FRED MEYER STORES INC (Continued)

Contact country: US
Contact telephone: 503-797-3750
Contact email: MARCUS.YOUNG@FREDMEYER.COM
EPA Region: 10
Land type: Private
Classification: Large Quantity Generator
Description: Handler: generates 1,000 kg or more of hazardous waste during any calendar month; or generates more than 1 kg of acutely hazardous waste during any calendar month; or generates more than 100 kg of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month; or generates 1 kg or less of acutely hazardous waste during any calendar month, and accumulates more than 1 kg of acutely hazardous waste at any time; or generates 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulates more than 100 kg of that material at any time

Owner/Operator Summary:

Owner/Op start date:  11/07/1980
Owner/Op end date:  Not reported

Handler Activities Summary:
- U.S. importer of hazardous waste:  No
- Mixed waste (haz. and radioactive):  No
- Recycler of hazardous waste:  No
- Transporter of hazardous waste:  No
- Treater, storer or disposer of HW:  No
- Underground injection activity:  No
- On-site burner exemption:  No
- Furnace exemption:  No
- Used oil fuel burner:  No
- Used oil processor:  No
- User oil refiner:  No
- Used oil fuel marketer to burner:  No
- Used oil Specification marketer:  No
- Used oil transfer facility:  No
- Used oil transporter:  No

- Waste code:  D001
- Waste name:  IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

- Waste code:  D002
- Waste name:  A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

- Waste code:  D003
- Waste name:  A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BE WASTE GUNPOWDER.

- Waste code:  D005
- Waste name:  BARIUM

- Waste code:  D007
- Waste name:  CHROMIUM

- Waste code:  D008
- Waste name:  LEAD

- Waste code:  D009

**FINDS:**

| Registry ID: | 110070135505 |

**Environmental Interest/Information System**

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

### FINDS:

Registry ID: 110037546518

**Environmental Interest/Information System**

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

**RCRAInfo** is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:
Registry ID: 110005309077

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,
DAVES AUTO PAINTING INC (Continued)

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA programstaff to track the notification, permit, compliance, and corrective action activities required under RCRA.

- Latitude: 47.712104361000002
- Longitude: -122.18654510499999

RCRA NonGen / NLR:
- Date form received by agency: 03/04/1996
- Facility name: US CLEANERS
- Facility address: 12547 116TH AVE NE KIRKLAND, WA 98033
- EPA ID: WAD988505608
- Contact: US CLEANERS US CLEANERS
- Contact address: 12547 116TH AVE NE KIRKLAND, WA 98034-4310
- Contact country: US
- Contact telephone: 000-000-0000
- Contact email: Not reported
- EPA Region: 10
- Classification: Non-Generator
- Description: Handler: Non-Generators do not presently generate hazardous waste

Owner/Operator Summary:
- Owner/operator name: STEVE K
- Owner/operator address: 12547 116TH AVE NE KIRKLAND, WA 98034
- Owner/operator country: US
- Owner/operator telephone: 425-820-0676
- Owner/operator email: Not reported
- Owner/operator fax: Not reported
### US CLEANERS (Continued)

**Owner/operator name:** STEVE K  
**Owner/operator address:** 12547 116TH AVE NE  
**KIRKLAND, WA 98034**

**Owner/operator phone:** 425-820-0676
**Owner/operator email:** Not reported

**Legal status:** Private
**Owner/Operator Type:** Operator

**Owner/Op start date:** 07/11/1996
**Owner/Op end date:** Not reported

**Handler Activities Summary:**
- U.S. importer of hazardous waste: No
- Mixed waste (haz. and radioactive): No
- Recycler of hazardous waste: No
- Transporter of hazardous waste: No
- Treater, storer or disposer of HW: No
- Underground injection activity: No
- On-site burner exemption: No
- Furnace exemption: No
- Used oil fuel burner: No
- Used oil processor: No
- User oil refiner: No
- Used oil fuel marketer to burner: No
- Used oil specification marketer: No
- Used oil transfer facility: No
- Used oil transporter: No

**Historical Generators:**
- Date form received by agency: 03/04/1996
- Site name: US CLEANERS
- Classification: Not a generator, verified

**Violation Status:** No violations found

**FINDS:**
- Registry ID: 110005374996

**Environmental Interest/Information System**
- Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

- RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of...
US CLEANERS (Continued) 1001490832

Events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

{..."Waste name": D001, ...}
SPECTRA LUX CORP (Continued)

LESSEE Than 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

- Waste code: D002
- Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

- Waste code: D006
- Waste name: CADMIUM

- Waste code: D011
- Waste name: SILVER

- Waste code: D018
- Waste name: BENZENE

- Waste code: D035
- Waste name: METHYL ETHYL KETONE

- Waste code: D039
- Waste name: TETRACHLOROETHYLENE

- Waste code: D040
- Waste name: TRICHLOROETHYLENE

- Waste code: F003
- Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

- Waste code: F005
- Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPAINE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Handler Activities Summary:**

- U.S. importer of hazardous waste: No
- Mixed waste (haz. and radioactive): No
- Recycler of hazardous waste: No
- Transporter of hazardous waste: No
- Treater, storer or disposer of HW: No
- Underground injection activity: No
- On-site burner exemption: No
- Furnace exemption: No
- Used oil fuel burner: No
- Used oil processor: No
- User oil refiner: No
- Used oil fuel marketer to burner: No
- Used oil Specification marketer: No

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**FINDS:**
- Registry ID: 110005362632

**Environmental Interest/Information System**

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

**STANDARD ENVIRONMENTAL RECORDS**

**Federal NPL site list**

NPL: National Priority List
National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA’s Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

| Date of Government Version: 07/17/2018 | Source: EPA |
| Date Data Arrived at EDR: 08/09/2018 | Telephone: N/A |
| Date Made Active in Reports: 09/07/2018 | Last EDR Contact: 10/04/2018 |
| Number of Days to Update: 29 | Next Scheduled EDR Contact: 01/14/2019 |
| Data Release Frequency: Quarterly |

  Telephone 415-947-4246

**Proposed NPL:** Proposed National Priority List Sites
A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

| Date of Government Version: 07/17/2018 | Source: EPA |
| Date Data Arrived at EDR: 08/09/2018 | Telephone: N/A |
| Date Made Active in Reports: 09/07/2018 | Last EDR Contact: 10/04/2018 |
| Number of Days to Update: 29 | Next Scheduled EDR Contact: 01/14/2019 |
| Data Release Frequency: Quarterly |

**NPL LIENS:** Federal Superfund Liens
Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.
• Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions
The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

• Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing
A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

• SEMS: Superfund Enterprise Management System
SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA’s Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

• Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive
SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal  
RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 03/01/2018  
Source: Environmental Protection Agency

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators  
RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Data Release Frequency: Quarterly
RCRA-SQG: RCRA - Small Quantity Generators
RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 03/01/2018

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators
RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Federal institutional controls / engineering controls registries

LUCIS: Land Use Control Information System
LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 05/14/2018
Date Data Arrived at EDR: 05/18/2018
Date Made Active in Reports: 07/20/2018
Number of Days to Update: 63
Source: Department of the Navy
Telephone: 843-820-7326
Last EDR Contact: 07/16/2018
Next Scheduled EDR Contact: 11/26/2018
Data Release Frequency: Varies

US ENG CONTROLS: Engineering Controls Sites List
A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 07/31/2018
Date Data Arrived at EDR: 08/28/2018
Date Made Active in Reports: 09/14/2018
Number of Days to Update: 17
Source: Environmental Protection Agency
Telephone: 703-603-0695
Last EDR Contact: 08/28/2018
Next Scheduled EDR Contact: 12/10/2018
Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls
A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 07/31/2018

Data Release Frequency: Semi-Annually

State- and tribal - equivalent CERCLIS

CSCSL: Confirmed and Suspected Contaminated Sites List
State Hazardous Waste Sites. State hazardous waste site records are the states’ equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

- Date of Government Version: 07/16/2018
- Date Data Arrived at EDR: 07/20/2018
- Date Made Active in Reports: 09/06/2018

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: Solid Waste Facility Database
Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

- Date of Government Version: 09/04/2018
- Date Data Arrived at EDR: 09/07/2018
- Date Made Active in Reports: 09/26/2018

PTAP: PTAP Site Listing
A list of sites accepted into the Petroleum Technical Assistance Program. The Petroleum Technical Assistance Program (PTAP) expands the state’s ability to respond to the high customer demand to clean up petroleum contaminated sites. Under the PTAP, the Pollution Liability Insurance Agency (PLIA) may provide informal site-specific technical consultations and issue written opinion letters to persons conducting independent remedial actions at qualifying petroleum cleanup sites. PLIA may provide these services under the authority of RCW 70.149.040(9) and the Model Toxics Control Act (MTCA), Chapter 70.149 RCW and Chapter 173-340 WAC.

Date of Government Version: 06/26/2018

VCP: Voluntary Cleanup Program Sites
Sites that have entered either the Voluntary Cleanup Program or its predecessor Independent Remedial Action Program.
State and tribal Brownfields sites

BROWNFIELDS: Brownfields Sites Listing
A listing of brownfields sites included in the Confirmed & Suspected Sites Listing. Brownfields are abandoned, idle or underused commercial or industrial properties, where the expansion or redevelopment is hindered by real or perceived contamination. Brownfields vary in size, location, age, and past use -- they can be anything from a five-hundred acre automobile assembly plant to a small, abandoned corner gas station.

Local Brownfield lists
US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Landfill / Solid Waste Disposal Sites
SWRCY: Recycling Facility List
A listing of recycling center locations.

SWTIRE: Solid Waste Tire Facilities
This study identified sites statewide with unauthorized accumulations of scrap tires.
GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SWTIRE 2: Solid Waste Tire Facilities 2
- solid waste tire piles

US CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.
Date of Government Version: 05/18/2018

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated
RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST
EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

Date of Government Version: 09/30/2017

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

Data Release Frequency: Annually

RMP: Risk Management Plans
When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g. the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System
RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

PRP: Potentially Responsible Parties
A listing of verified Potentially Responsible Parties

PADS: PCB Activity Database System
PCB Activity Database. PADS identifies generators, transporters, commercial storers and/or brokers and disposers of PCB’s who are required to notify the EPA of such activities.

ICIS: Integrated Compliance Information System
The Integrated Compliance Information System (ICIS) supports the information needs of the national enforcement and compliance program as well as the unique needs of the National Pollutant Discharge Elimination System (NPDES) program.
FTTS: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)

FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA and EPCRA (Emergency Planning and Community Right-to-Know Act). To maintain currency, EDR contacts the Agency on a quarterly basis.

RADINFO: Radiation Information Database

The Radiation Information Database (RADINFO) contains information about facilities that are regulated by U.S. Environmental Protection Agency (EPA) regulations for radiation and radioactivity.

Source: N/A
HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The
information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA
(Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions
are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters
with updated records, it was decided to create a HIST FTTS database. It included records that may not be included
in the newer FTTS database updates. This database is no longer updated.

HIST FTTS INSP: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing
A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA
regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation
of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some
EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing
EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that
may not be included in the newer FTTS database updates. This database is no longer updated.

DOT OPS: Incident and Accident Data
Department of Transportation, Office of Pipeline Safety Incident and Accident data.

CONSENT: Superfund (CERCLA) Consent Decrees
Major legal settlements that establish responsibility and standards for cleanup at NPL (Superfund) sites. Released
periodically by United States District Courts after settlement by parties to litigation matters.

BRS: Biennial Reporting System
The Biennial Reporting System is a national system administered by the EPA that collects data on the generation
and management of hazardous waste. BRS captures detailed data from two groups: Large Quantity Generators (LQG)
and Treatment, Storage, and Disposal Facilities.
INDIAN RESERV: Indian Reservations
This map layer portrays Indian administered lands of the United States that have any area equal to or greater than 640 acres.

UMTRA: Uranium Mill Tailings Sites
Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)
The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.
GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

US AIRS MINOR: Air Facility System Data
A listing of minor source facilities.

US MINES: Mines Master Index File
Contains all mine identification numbers issued for mines active or opened since 1971. The data also includes violation information.

US MINES 2: Ferrous and Nonferrous Metal Mines Database Listing
This map layer includes ferrous (ferrous metal mines are facilities that extract ferrous metals, such as iron ore or molybdenum) and nonferrous (Nonferrous metal mines are facilities that extract nonferrous metals, such as gold, silver, copper, zinc, and lead) metal mines in the United States.

US MINES 3: Active Mines & Mineral Plants Database Listing
Active Mines and Mineral Processing Plant operations for commodities monitored by the Minerals Information Team of the USGS.

ABANDONED MINES: Abandoned Mines
An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.
FINDS: Facility Index System/Facility Registry System
FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR’s researchers. Manufactured gas sites were used in the United States from the 1800’s to 1950’s to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR’s review was limited to those categories of sources that might, in EDR’s opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as “High Risk Historical Records”, or HRHR. EDR’s HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

COUNTY RECORDS

KING COUNTY:

LF KING: Abandoned Landfill Study in King County
The King County Abandoned Landfill Survey was conducted from October through December 1984 by the Health Department’s Environmental Health Division at the request of the King County Council. The primary objective of the survey was to determine if any public health problems existed at the predetermined 24 sites.

Date of Government Version: 04/30/1985
Source: Seattle-King County Department of Public Health
Date Data Arrived at EDR: 11/07/1994
Telephone: 206-296-4785
Date Made Active in Reports: N/A
Last EDR Contact: 10/21/1994
Number of Days to Update: 0
Next Scheduled EDR Contact: N/A
Data Release Frequency: No Update Planned

SEATTLE COUNTY:

LF SEATTLE CITY: Abandoned Landfill Study in the City of Seattle
The Seattle Abandoned Landfill Survey was conducted in June and July of 1984 by the Health Department’s Environmental Health Division at the request of the Mayor’s Office. The primary objective of the survey was to determine if any public health problems existed at the predetermined 12 sites.

Date of Government Version: 07/30/1984
Source: Seattle - King County Department of Public Health
Date Data Arrived at EDR: 11/07/1994
Telephone: 206-296-4785
Date Made Active in Reports: N/A

Data Release Frequency: No Update Planned

SEATTLE/KING COUNTY:

LF SEATTLE/KING: Seattle - King County Abandoned Landfill Toxicity / Hazard Assessment Project
This report presents the Seattle-King County Health Department’s follow-up investigation of two city owned and four county owned abandoned landfills which was conducted from February to December 1986.

Date of Government Version: 12/31/1986
Source: Department of Public Health
Date Data Arrived at EDR: 08/18/1995
Telephone: 206-296-4785
Date Made Active in Reports: 09/20/1995
Last EDR Contact: 08/14/1995
Number of Days to Update: 33
Next Scheduled EDR Contact: N/A
Data Release Frequency: No Update Planned

SNOHOMISH COUNTY:

LF SNOHOMISH: Solid Waste Sites of Record at Snohomish Health District
Solid waste disposal and/or utilization sites in Snohomish County.

Date of Government Version: 11/16/2011
Source: Snohomish Health District
Date Data Arrived at EDR: 03/29/2012
Telephone: 206-339-5250
Date Made Active in Reports: 05/03/2012
Last EDR Contact: 09/21/2018
Number of Days to Update: 35
Next Scheduled EDR Contact: 12/31/2018
Data Release Frequency: Semi-Annually

TACOMA/PIERCE COUNTY:

LF TACOMA/PIERCE: Closed Landfill Survey
Following numerous requests for information about closed dumpsites and landfills in Pierce County, the Tacoma-Pierce County Health Department decided to conduct a study on the matter. The aim of the study was to evaluate public health risks associated with the closed dumpsites and landfills, and to determine the need, if any, for further investigations of a more detailed nature. The sites represent all of the known dumpsites and landfills closed after 1950.
OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

- Date of Government Version: 08/10/2018
- Date Data Arrived at EDR: 08/10/2018
- Date Made Active in Reports: 09/10/2018

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Daycare Center Listing
Source: Department of Social & Health Services
Telephone: 253-383-1735

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Ecology
Telephone: 360-407-6121

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey
Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.
GROUNDWATER FLOW DIRECTION INFORMATION
Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION
Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY
General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5’ Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.
HYDROLOGIC INFORMATION
Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION
Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:
- Search Radius: 1.25 miles
- Location Relative to TP: 1/2 - 1 Mile NE
- Site Name: GOLDEN PENN OIL CO OF SEATTLE
- Site EPA ID Number: WAD08S197945
- Groundwater Flow Direction: NOT AVAILABLE
- Inferred Depth to Water: 10 feet to 30 feet
- Hydraulic Connection: The near-surface aquifer is located in a sand and gravel outwash beneath the Vashon till.
- Sole Source Aquifer: No information about a sole source aquifer is available
- Data Quality: Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®
Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

For additional site information, refer to Physical Setting Source Map Findings.
GROUNDWATER FLOW VELOCITY INFORMATION
Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY
Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture’s (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

---

**Soil Map ID: 1**

Soil Component Name: Seattle
Soil Surface Texture: muck
Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.
Soil Drainage Class: Very poorly drained
Hydric Status: All hydric
Corrosion Potential - Uncoated Steel: High
Depth to Bedrock Min: > 0 inches
Depth to Watertable Min: > 0 inches

TOPOGRAPHIC INFORMATION

USGS 7.5’ Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5’ Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Ecology
Telephone: 360-407-6121

HYDROGEOLOGIC INFORMATION

AQUIFLOW® Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture’s (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.
LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Wells
Source: Department of Health
Telephone: 360-236-3148
Group A and B well locations.

Water Well Listing
Source: Public Utility District
Telephone: 206-779-7656
A listing of water well locations in Kitsap County.

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Listing
Source: Department of Natural Resources
Telephone: 360-902-1450
Locations that represent oil and gas test well sites in Washington State from 1890 to present.

RADON

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR’s Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey.

Inquiry Number: 5463995.8
October 25, 2018
Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR’s professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

ENVIRONMENTAL LIENS AND ACTIVITY AND USE LIMITATIONS
EDR Environmental Lien and AUL Search
The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerk's offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050 with any questions or comments.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OR DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT. Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

APPENDIX H

PROFESSIONAL QUALIFICATIONS
Vance Atkins, LG/LHG/CPG

Summary of Relevant Experience
Mr Atkins has acted as task and project manager on a wide range of site investigations and remediations in the Puget Sound region, including preparing sampling and analysis plans, conducting investigations and directing remedial activities. He provides on-call hazardous materials consulting services for pre-construction and construction activities.

Specific Experience

On-Call Environmental Due Diligence Consulting – As the Project Manager for Seattle Parks, Mr. Atkins performed on-call environmental services included performing Phase II soil and ground water sampling at parcels under consideration for property transfer and development, preparation of remedial options and engineering cost estimates, sampling and characterization of soils prior to construction for disposal requirements, and client meetings with affect parties during purchase and sale discussions.

On-Call Hazardous Material Consulting – Mr. Atkins is the project manager for on-call environmental services for client construction projects at the Port of Everett facility. On-call tasks include sampling and characterization of soils prior to construction for disposal requirements, rapid response to assess unforeseen or stockpiled contaminated soils encountered during construction, preparation of Contained-in requests for soils containing chlorinated solvents, and review of construction specifications associated with contaminated materials handling and disposal.

Hazardous Material Consulting and Management – As the Project Manager for pre-construction and construction-phase hazardous materials management for Seattle Department of Transportation, work included delineation of halogenated solvent-contaminated soils and securing Contained-in determination prior to construction. Mr. Atkins also reviewed project specifications and assisted the client and contractor in selecting a waste disposal facility and ongoing waste management. The Contained-in determination was subsequently updated due to project schedule extensions and changes in waste soil volumes due to project changes. He prepared a project closure report summarizing source areas, soil volumes, and analytical results.

Multi-Site Characterization and Remediation of Multiple Contaminants – Mr. Atkins completed initial due diligence ESAs of eight properties for negotiation and purchase by the City of Bothell. He developed sampling and analysis plans for the properties, conducted on-site investigations to delineate contaminated areas, and identified construction impacts. These included petroleum, polycyclic aromatic hydrocarbons and metals contamination in soils and ground water. Mr. Atkins oversaw and managed subsequent excavation of contaminated soils from four properties, conducted confirmation sampling and day-to-day management with the client’s project engineer and general contractor. Daily management included tracking of disposed multiple waste streams from multiple parcels for Ecology reimbursement. He prepared the cleanup reports. The work was performed under both Ecology Agreed Orders and the Voluntary Cleanup Program.

Petroleum-Affected Soil Remediation – Mr. Atkins acted as project and task manager for petroleum-affected soil remediation in preparation for future property redevelopment by the City of Everett. He conducted delineation to segregate clean overburden from underlying petroleum-affected soils prior to mass excavation. Mr. Atkins directed remediation contractor during excavation activities, collected confirmation samples, directed the placement of Oxygen Release Compound® along excavation sidewalls inaccessible to excavation. The work was performed under the Voluntary Cleanup Program.
Remedial Investigation/Feasibility Study, Halogenated Solvents. – Mr. Atkins managed and performed an RI/FS within a Washington State correctional facility to assess sources of halogenated solvents in ground water. He reviewed previous investigations, and conducted multiple phases of subsurface investigations including geophysics, test pits, and well drilling. The work was performed within the secure perimeter, necessitating clearances, daily inspections, and flexible working hours. The investigation was performed with direct oversight by and coordination with Corrections’ environmental manager and Ecology’s project manager. The site is currently under consideration for a No Further Action determination.

Phase I ESAs and Environmental Due Diligence – Mr. Atkins has performed and/or managed over 150 single- and multiple-site Phase I ESAs for residential, commercial and industrial properties throughout Washington, Oregon and Alaska. Assessments were conducted in general accordance with ASTM E-1527-13 and other applicable standards. Additionally, he has completed several corridor studies and historical due diligence as part of roadway or utility project design and engineering to determine if additional investigations or modified project specifications will be necessary.

Pre-Construction Due Diligence Corridor Study – Mr. Atkins prepared a corridor study to assess the potential for encountering contaminated soils and/or ground water during an arterial widening and reconstruction project in Burien, Washington. The project footprint was comprised of one-half mile of roadway with 26 adjoining parcels. Potential environmental impacts from past and current land use were assessed by review of historical tax records and aerial photographs, environmental database review, regulatory file review, and reconnaissance. Mr. Atkins reviewed construction specifications and contractor submittals, and prepared health and safety and monitoring plans for the excavation and handling of petroleum and solvent contaminated soils and ground water during construction. The review was based on hazardous material investigation procedures described in the WSDOT Environmental Procedures Manual.

NEPA Discipline Reports – Mr. Atkins completed geology and hazardous materials discipline reports to identify potential effects to the proposed project resulting from hazardous materials, soils, and site geology, and to formulate mitigation measures to reduce or eliminate these effects. The reports were completed in accordance with WSDOT guidances.

Corridor Study and Phase I ESA – Mr. Atkins performed a corridor study of approximately 7,700 linear feet of roadway in Snohomish County, Washington. The study was performed to assess the potential to encounter contaminated soil and ground water during roadway improvements, which included roadway widening, drainage improvements, and utilities. A subsequent Phase I ESA was performed for a parcel under consideration for purchase for siting of a storm water facility. The assessments were performed, in part, to meet Snohomish County environmental checklist requirements, in addition to ASTM standards.

Large-Scale Forestlands Phase I ESA – Mr. Atkins managed and performed a Phase I ESA on a subject property comprised of 20 discontinuous parcels adjoining the Hoh River in the western Olympic Peninsula. The property is undeveloped forest land, except for periodic timber harvesting. The 2,057-acre property was transferred from timber company ownership to temporary land conservancy ownership prior to transfer to public land.
APPENDIX I

TERMINOLOGY
TERMINOLOGY

The following provides definitions and descriptions of certain terms that may be used in this report. Italics indicate terms that are defined by ASTM Standard Practice E 1527-13. The Standard Practice should be referenced for further detail related definitions or additional explanation regarding the meaning of terms.

**Recognized environmental condition(s) (REC):** The presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, ground water, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include de minimis conditions.

**De minimis conditions:** Conditions that generally do not present threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis are not recognized environmental conditions.

**Historical recognized environmental condition(s) (HREC):** Environmental condition which in the past would have been considered a recognized environmental condition, but which may or may not be considered a recognized environmental condition currently. The final decision rests with the environmental professional and will be influenced by the current impact of the historical recognized environmental condition on the property. If a past release of any hazardous substances or petroleum products has occurred in connection with the property, with such remediation accepted by the responsible regulatory agency (for example, as evidenced by the issuance of a no further action letter or equivalent), this condition shall be considered a historical recognized environmental condition.

**Material threat:** A physically observable or obvious threat which is reasonably likely to lead to a release that, in the opinion of the environmental professional, is threatening and might result in impact to public health or the environment. An example might include an aboveground storage tank that contains a hazardous substance and which shows evidence of damage such that it may cause or contribute to tank integrity failure with a release of contents to the environment.
**Material impact to public health or environment:** A substantial risk of harm to public health or the environment resulting from the presence or likely presence of an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, ground water, or surface water of the property. An example might include a release of a hazardous substance in concentrations exceeding applicable governmental agency standards under conditions that could reasonably and foreseeably result in substantial exposure to humans or substantial damage to natural resources. The risk of that exposure or damage would represent a material impact to public health or environment.

**General risk of enforcement action:** The likelihood that an environmental condition would be subject to enforcement action if brought to the attention of appropriate governmental agencies. If the circumstances suggest an enforcement action would be more likely than not, then the condition is considered a general risk of enforcement action.

**Data failure:** A failure to achieve the historical research objectives, even after reviewing the standard historical sources that are reasonably ascertainable and likely to be useful. Data failure is one type of data gap.

**Data gap:** A lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. Data gaps may result from incompleteness in any of the activities required by this practice, including, but not limited to site reconnaissance (for example, an inability to conduct the site visit), and interviews (for example, an inability to interview the key site manager, regulatory officials, etc.).

Redmond, WA 98052

RE: Kirkland Totom Lake
Work Order Number: 1811297

November 28, 2018

Attention Vance Atkins:

Fremont Analytical, Inc. received 3 sample(s) on 11/19/2018 for the analyses presented in the following report.

Diesel and Heavy Oil by NWTPH-Dx/Dx Ext.
Mercury by EPA Method 7471
Polyaromatic Hydrocarbons by EPA Method 8270 (SIM)
Sample Moisture (Percent Moisture)
Total Metals by EPA Method 6020

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

[Signature]

Mike Ridgeway
Laboratory Director

Note: If no "Time Collected" is supplied, a default of 12:00AM is assigned.
I. SAMPLE RECEIPT:
Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:
Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

Matrix Spike (MS) and MS Duplicate (MSD) samples are tested from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. The sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:
Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.
Qualifiers:

* - Flagged value is not within established control limits
B - Analyte detected in the associated Method Blank
D - Dilution was required
E - Value above quantitation range
H - Holding times for preparation or analysis exceeded
I - Analyte with an internal standard that does not meet established acceptance criteria
J - Analyte detected below Reporting Limit
N - Tentatively Identified Compound (TIC)
Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20% RSD, <20% Drift or minimum RRF)
S - Spike recovery outside accepted recovery limits
ND - Not detected at the Reporting Limit
R - High relative percent difference observed

Acronyms:

%Rec - Percent Recovery
CCB - Continued Calibration Blank
CCV - Continued Calibration Verification
DF - Dilution Factor
HEM - Hexane Extractable Material
ICV - Initial Calibration Verification
LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
MB or MBLANK - Method Blank
MDL - Method Detection Limit
MS/MSD - Matrix Spike / Matrix Spike Duplicate
PDS - Post Digestion Spike
Ref Val - Reference Value
RL - Reporting Limit
RPD - Relative Percent Difference
SD - Serial Dilution
SGT - Silica Gel Treatment
SPK - Spike
Surr - Surrogate

**Sample Log-In Check List**

**Client Name:** ONEILL  
**Work Order Number:** 1811297

**Logged by:** Clare Griggs  
**Date Received:** 11/19/2018 5:50:00 PM

---

**Chain of Custody**

1. Is Chain of Custody complete?  
   - Yes ☑️  
   - No ☐  
   - Not Present ☐

2. How was the sample delivered?  
   - Client

---

**Log In**

3. Coolers are present?  
   - Yes ☑️  
   - No ☐  
   - NA ☐

4. Shipping container/cooler in good condition?  
   - Yes ☑️  
   - No ☐

5. Custody Seals present on shipping container/cooler?  
   - Yes ☑️  
   - No ☐  
   - Not Required ☑️

   (Refer to comments for Custody Seals not intact)

6. Was an attempt made to cool the samples?  
   - Yes ☑️  
   - No ☐

   NA ☐

7. Were all items received at a temperature of >0°C to 10.0°C *  
   - Yes ☑️  
   - No ☐  
   - NA ☐

8. Sample(s) in proper container(s)?  
   - Yes ☑️  
   - No ☐

9. Sufficient sample volume for indicated test(s)?  
   - Yes ☑️  
   - No ☐

10. Are samples properly preserved?  
    - Yes ☑️  
    - No ☐

11. Was preservative added to bottles?  
    - Yes ☑️  
    - No ☐

   NA ☐

12. Is there headspace in the VOA vials?  
    - Yes ☑️  
    - No ☐  
    - NA ☑️

13. Did all samples containers arrive in good condition(unbroken)?  
    - Yes ☑️  
    - No ☐

14. Does paperwork match bottle labels?  
    - Yes ☑️  
    - No ☐

15. Are matrices correctly identified on Chain of Custody?  
    - Yes ☑️  
    - No ☐

16. Is it clear what analyses were requested?  
    - Yes ☑️  
    - No ☐

17. Were all holding times able to be met?  
    - Yes ☑️  
    - No ☐

**Special Handling (if applicable)**

18. Was client notified of all discrepancies with this order?  
    - Yes ☑️  
    - No ☐  
    - NA ☑️

* Note: DoD/ELAP and TNI require items to be received at 4ºC +/- 2ºC
Focus on **Treated Wood Exclusion**

With increased attention being focused on the safety of treated wood, there is a need to clarify the dangerous waste exclusion for treated wood and to clarify the disposal and recycling options. The exclusion is divided into two parts in the *Dangerous Waste Regulations*. Arsenical-treated wood is discussed in WAC 173-303-071(3) (g) (i) and wood treated with other preservatives (typically pentachlorophenol and creosote) is covered in WAC 173-303-071(3) (g) (ii).

**Arсенical-Treated Wood (WAC 173-303-071(3)(g))**

In simple terms, the conditions for the arsenical-treated wood exclusion are:

1. **it designates only for the federal toxicity characteristic or for state criteria, and**
2. **the wood product has previously been used for its intended purpose as a treated wood (not to include treated wood wastes from manufacturers or sawmills that has never been used).**

Once the treated wood meets these conditions, it is excluded from being a dangerous waste. It may go into a permitted solid waste landfill, or be reused for normal treated wood applications.

This exclusion applies to arsenical-treated wood that is designated as dangerous waste for toxicity characteristic D004 through D017 or state criteria (toxicity or persistence). The term “arsenical-treated wood” does not mean the exclusion only applies to treated wood that fails the toxicity characteristic leaching procedure (TCLP) *solely* for arsenic. The exclusion is intended to apply to treated wood that fails TCLP for any of the other fourteen toxicity characteristic (D004-D017) constituents. Typically, copper chromated arsenic (CCA) treated wood fits this description. Ammoniacal copper zinc arsenate (ACZA) preservative is another example, but it is used less frequently to treat wood.

What does “**generated by persons who utilize the arsenical-treated wood for the material’s intended end use**” mean? EPA intended for the exclusion to apply to treated wood products that have been *previously* used as a treated wood and are now a waste. The exclusion does not apply to wastes from sawmills (such as cut ends) or wood preserving facilities, since the waste has not been previously used as treated wood.
Once the treated wood has been used by the consumer, it fulfills the conditions of the exclusion. According to WAC 173-303-071(3), it becomes “excluded from the requirements of chapter 173-303 WAC, except for sections -050, -145 and -960.” These sections cover spills and releases, clean up, and Ecology’s ability to take action if an activity would cause harm to human health or the environment.

Example
CCA treated wood was used to construct municipal park playground equipment and the parks department now wants to remove the structure. What are the disposal options? It is known the wood is treated with CCA and may possibly designate for chrome (D007) and arsenic (D004), but it would not designate for D018-D043 based on information such as a Material Safety Data Sheet (MSDS). The parks department may offer the treated wood for reuse by others, dispose of the treated wood at a permitted municipal solid waste landfill (if local regulations allow) or at a treatment, storage and disposal (TSD) facility. If the wood is given to others for reuse, they would have the same disposal options once they were through using the wood.

Wood Treated With Other Preservatives (WAC 173-303-071(3) (g) (ii))
In 1993, Ecology amended the Dangerous Waste Regulations to exclude wood treated with preservatives other than those covered by the arsenical-treated wood exclusion. This exclusion is available only for wood waste that designates for state toxicity or persistence. Typically this includes wood treated with pentachlorophenol and creosote. Wood treated with these chemicals does not often designate as a hazardous waste under the TCLP test, but it may designate under state dangerous waste criteria.

Disposal Options
The exclusion allows disposal of state-only treated wood waste in a municipal solid waste landfill permitted under chapter 173-351 WAC. Treated wood waste must go to a lined landfill with a leachate collection system. This landfill option cannot be used for wood waste that designates because it is listed or fails the TCLP test, but it may be sent to a non-permitted facility that will treat or recycle it. It may also be sent to a permitted TSD facility. An additional part of the exclusion applies only to creosote treated wood. Creosote treated wood may be burned for energy recovery in a regulated commercial or industrial furnace or boiler.

With any of these disposal options, the treated wood waste does not have to be managed or reported as a dangerous waste, but it must be removed from the generator’s site within 180 days. Any residue or ash resulting from treating or burning creosote treated wood must be designated and managed appropriately.
Ecology encourages the reuse of this kind of treated wood as a preferred management alternative. If the wood is reused, it is not regulated as a dangerous waste provided that the reuse is consistent with the intended end use of the treated wood. Examples of reuse include: fence posts, retaining walls, landscaping, decks, and general construction.

Survey Summary

On November 14, 2018, Jon Havelock, Eric Jarvis and Jason Carlson of Med-Tox Northwest (MTNW) conducted a hazardous building materials (HBM) survey of the property located at 12031 Northeast Totem Lake Way in Kirkland, Washington. This work was conducted on behalf of O’Neill Service Group. The building was occupied at the time of the survey; however, at the request of property management, only limited destructive sampling was allowed.

This report identifies building materials that contain asbestos, estimates the quantity of asbestos-containing material (ACM) present and documents building materials that potentially contain lead-based paint (LBP), polychlorinated biphenyls (PCBs), and other hazardous materials that require removal or management as part of demolition activities. Washington Administrative Code (WAC) 296-155-775 requires identification of asbestos and hazardous materials and their hazards eliminated before demolition is started.

As required by WAC 296-62-077 and Puget Sound Clean Air Agency (PSCAA), building inspectors certified under the Asbestos Hazard Emergency Response Act (AHERA) and employed by MTNW conducted the asbestos portion of the survey. Copies of the inspector’s AHERA Building Inspector certificate and Washington Department of Commerce (WDOC) LBP Inspector/Risk Assessor certificates are included in Appendix A.

No previous HBM surveys or as-built construction documents were available as part of the survey.

Building Information

Photographic documentation of the structure and the major systems described herein are provided in Appendix B.

General and Structural: Originally constructed in 1979 the structure at 12031 NE Totem Lake Way is approximately 7000 square feet (SF) in size. The building is currently occupied by two different companies which use their areas as office space. Prior to the current tenants, this building was used as a retail store.

There is one main floor to the building with the addition of a second tier wrap around storage area. The interior of the building is divided into three main areas; an entry way and two office spaces. The entryway consists of two restrooms, a custodial closet, and one office room.

Office 1 is composed of a main office area, a long meeting room, a back-office area, a conference room, a closet area, a bathroom, and an electrical room. Office 2 consisted of one open office space with a closet space in the SE corner.
The building is constructed on a concrete slab foundation, is wood-framed and finished with plywood siding on the bottom portion and silver rib-metal paneling on the upper portion. Exterior windows were vinyl-framed, and aluminum-framed with steel rebar stretching horizontally over the interior portion of the windows. Interior doors are hollow core wood and metal, exterior doors were metal and wood framed. The roof is a combination of a pitched roof and built up roof. The pitched roof sections of the building were finished with brown rib-metal paneling. The built-up roofing system was inaccessible during the time of the survey. The roof for the entrance overhang was finished with gray rib-metal paneling.

A 120 SF detached wood-framed shed is located east of the southeast section of the building. The shed was finished with the same plywood siding as the building. The roof was finished with multiple layers of asphalt roofing shingles. The interior walls and ceiling of the shed were finished with sprayed on yellow foam insulation.

**Heating and Mechanical Systems:** Heat for the building is provided by electric baseboards and central heating, ventilation, and air conditioning (HVAC) system. Pipes that were observed either had a polyethylene wrap or they were un-insulated.

**Walls/Ceiling:** Interior walls of the building were finished with a heavy textured gypsum wallboard (GWB) system, an orange peel textured GWB system, untextured GWB, lap wood siding, and vinyl sheet board. Bathroom walls were finished with ceramic wall tiles. In addition, walls were also finished with wood, brick, ceramic tile, and vinyl cove base. Ceilings of the building were finished with a heavy textured GWB system, an orange peel textured GWB system, untextured GWB, or horizontal wood planks.

**Floor Systems:** Floors of the building were primarily a concrete sub-floor, with wood sub-floor found in elevated areas of Office 1. Offices and the entry way were primarily finished with glued-down carpet. Office 1 and 2 also had parquet wood tiles, sheet vinyl tiles, sheet vinyl flooring (SVF), and ceramic tiles. Bathrooms floors were finished with ceramic tiles.

**Asbestos Survey**

The AHERA regulation, 40 Code of Federal Regulation (CFR) 763, is the primary governing regulation when performing asbestos surveys. This regulation was originally enacted for school buildings but has since been applied to public and commercial buildings by the Asbestos School Hazard Abatement Reauthorization Act (ASHARA) in 1994 and by the Occupational Safety and Health Administration’s (OSHA) worker protection regulations in 1995, specifically 29 CFR 1926.1101(k).

PSCAA also requires compliance with AHERA’s survey and sampling requirements. This applies to any renovation or demolition activities where suspect ACM may be disturbed. PSCAA is a local agency that receives statutory authority from the U.S. Environmental Protection Agency (EPA) to enforce environmental regulations.
AHERA divides suspect ACM into three categories; “surfacing materials” (i.e., sprayed fireproofing, popcorn ceiling texture, etc.), “thermal system insulation” (TSI) (i.e., pipe or building insulation, etc.), and “miscellaneous materials” (i.e., flooring material, roofing, construction mastics, etc.). The following sections summarize the potential ACMs identified for each of these three categories. For a complete listing of suspect materials sampled, see Appendix C. See Appendix J for drawings of asbestos and lead sample locations and material types.

The following sections summarize the potential ACMs identified by homogeneous material (HM) description as they relate to each of the AHERA categories and clarify location along with the number of samples collected for regulatory compliance.

**Surfacing Materials**

There were four surfacing materials observed in the building.

- **Heavy Troweled Textured GWB system (HM-01).** HM-01 was identified on the walls throughout the building. Nine samples of HM-01 were collected between the two offices and entrance. After being analyzed for asbestos content HM-01 was determined to be negative for asbestos.

- **Untextured GWB (HM-02).** Untextured GWB was present in the entrance area and in Office 1. Five samples were collected between the two areas and analyzed for asbestos content; HM-02 was found to be negative for asbestos.

- **Orange peel textured GWB system (HM-03).** Orange peel textured GWB was present in the entrance area restrooms, entry way office, custodial closet, and in the conference room of Office 1. Seven samples of HM-03 were collected from seven different locations then analyzed for asbestos content. HM-03 was found to be negative for asbestos.

- **Sprayed on yellow foam insulation (HM-26).** HM-26 was observed on the walls and ceilings of the shed. Three samples of HM-26 were collected and analyzed for asbestos content; no asbestos detected.

**Thermal System Insulation**

There was one TSI material observed in the building.

- **Pink wall insulation (HM-23).** HM-23 was found in an exposed area of the wall inside the electrical room. Three samples were collected and analyzed for asbestos content; no asbestos was detected.

**Miscellaneous Materials**

- **Wall laminate board with yellow mastic (HM-04).** HM-04 was identified on the NW wall of the meeting room in Office 1. Two samples of HM-04 were collected and analyzed for asbestos content. HM-04 was determined to be negative for asbestos.
Wall laminate board with orange mastic (HM-05). HM-05 was identified on the N wall of the meeting room hallway in Office 1. Two samples of HM-05 were collected and analyzed for asbestos content. HM-05 was determined to be negative for asbestos.

Wall laminate board with brown mastic (HM-06). HM-06 was found in the NW corner of the meeting room in Office 1 on the E wall. Two samples were collected and analyzed for asbestos content; no asbestos was detected.

3- x 3-inch brown wall tile with grout (HM-07). HM-07 was present in the men’s and women’s restroom. Two samples were collected and analyzed for asbestos content; this material was determined to be negative for asbestos.

3- x 3-inch brown wall with yellow and green mastic (HM-08). HM-08 was found in the men’s restroom. Two samples were collected and analyzed for asbestos content; no asbestos was detected.

6- x 6-inch red floor tile with grout (HM-09). This material was present in Office 2, the electric room, and both the men’s and women’s restroom. Two samples were collected and analyzed for asbestos content; no asbestos was detected.

Dark gray and red carpet with yellow mastic (HM-10). HM-10 was present in the entry way, Office 1, and Office 2. Three samples (one from each area) were collected and analyzed for asbestos content; HM-10 was found to be negative for asbestos.

Blue and gray carpet with yellow mastic (HM-11). HM-11 was present in the entry way, Office 1, and Office 2. Three samples (one from each area) were collected and analyzed for asbestos content; HM-11 was found to be negative for asbestos.

Parquet wood floor tile with white mastic and grout (HM-12). HM-12 was identified in the main office area of Office 1. Two samples were collected and analyzed for asbestos content; no asbestos was detected.

Parquet wood floor tile with dark yellow mastic (HM-13). HM-13 was identified in Office 2. Two samples were collected and analyzed for asbestos content; no asbestos was detected.

12- x 12-inch green and yellow SVT with yellow mastic (HM-14). HM-14 was discovered in the main office of Office 1 under HM-10. Two samples were collected and analyzed for asbestos content; no asbestos was detected.

6- x 6-inch brown/white square pattern SVF with brown binder (HM-15). This material was observed in the electrical room hallway. Three samples were collected and analyzed for asbestos; no asbestos was detected.
Brick wall base with white paint and grout (HM-16). This material was observed in the NW corner of the meeting room in Office 1. Two samples were collected and analyzed for asbestos; no asbestos was detected.

Gray wall base grout with white paint (HM-17). This material was found in the conference room of Office 1. Two samples were collected and analyzed for asbestos content; no asbestos was detected.

Black vinyl cove base with yellow mastic (HM-18). HM-18 was identified in the entry way office. Two samples were collected and analyzed for asbestos content; this material was determined to be negative for asbestos.

Gray vinyl cove base with brown mastic (HM-19). HM-19 was identified in Office 2. Two samples were collected and analyzed for asbestos content; HM-19 was determined to be negative for asbestos.

Tan cove base with yellow mastic (HM-20). HM-20 was identified in the SE bathroom of Office 1. Two samples were collected and analyzed for asbestos content; no asbestos was detected.

Brown wall base sealant (HM-21). HM-21 found along the N wall of the meeting room hallway in Office 1. Two samples were collected and analyzed for asbestos content; no asbestos was detected.

Extterior window caulking (HM-22). This material was observed on exterior window frames. Three samples were collected and analyzed for asbestos; this material was determined to be negative for asbestos.

Wall VBP (HM-24). HM-24 was found under the GWB of the second level storage area. Three samples were collected and analyzed for asbestos content; no asbestos was detected.

Asphalt roofing shingles and VBP (HM-25). The shed roof was covered by multiple layers of asphalt roof shingles with VBP over the plywood sheathing. Three samples were collected and analyzed for asbestos content; no asbestos was detected.

Lead-Based Paint Summary

Lead was commonly used in most paint products until 1978, when it was banned from residential paints at concentrations greater than 600 parts per million (ppm) and then reduced to 90 ppm in 2012; however, commercial applications with lead are still utilized and available. Lead is poisonous to the human body and presents a potential health hazard during any kind of disturbance (such as maintenance, including grinding,
welding, and cutting) and if improperly disposed, where lead can enter drinking water supplies.

EPA defines LBP as a concentration of 1.0 milligrams per square centimeter (mg/cm²) or greater by x-ray fluorescence (XRF) or 0.5 percent in weight (% wt.) or greater by total lead analysis; equivalent to 5,000 milligrams per kilogram (mg/kg). This EPA action level triggers requirements for protection of the environment, maintenance workers, and building occupants in child occupied facilities as defined by 40 CFR 745. Additionally, building components exceeding EPA lead levels may cause demolition waste streams to fail waste designation sampling performed for compliance with WAC 173-303 Dangerous Waste Regulations.

Washington Department of Occupational Safety and Health (DOSH) worker protection regulations have not defined a minimum concentration for regulating lead and has clarified that lead at any detectable concentration shall be considered regulated by WAC 296-155-176, Lead. Paint sample results can be expressed in mg/kg (same as ppm), % wt. or mg/cm² by area depending on the type of analytical method used. Any positive result, regardless of the reporting method by the laboratory, will require compliance with WAC 296-155-176.

**Lead in Painted Surfaces**

Interior painted surfaces were tested for lead content using bulk sample collection and chemical analysis. A total of nine paint chip samples were collected. Analytical results are provided in **Table 3**.

_ppm = parts per million. Note: This table is not to be used without the complete survey document including appendices for additional information._
Waste Designation Survey

Construction waste or demolition debris expected as a result of 8808.2 consists of most of the building materials due to limited recycling value for the type of construction. Due to no Pb, toxicity characteristic leaching procedure (TCLP) samples were not collected.

All nine samples analyzed were determined to contain lead less than the detection limit of the analytical method. Based on these results, the demolition waste from the building can be disposed of as general construction debris.

Other Hazardous Building Materials

Chlorofluorocarbons
MTNW inspected the building for cooling systems with potential chlorofluorocarbons (CFCs); none were observed.

PCB Light Ballasts and Fluorescent Light Tubes

Older fluorescent light ballasts have small capacitors that may contain high concentrations of PCBs. Nearly all ballasts manufactured before 1979 contain PCBs. All ballasts manufactured after July 1, 1978 that do not contain PCBs are required to be clearly marked "No PCBs". Unmarked ballasts or ballasts without a date code should be assumed to be PCB ballasts. PCBs are toxic chemicals according to the EPA. While there is only a small amount, about one ounce, of PCBs in each light ballast capacitor, there are a large number of ballasts in the United States. A "No PCB" label means there are less than 50 ppm PCBs; however, in the state of Washington, PCB in oils are regulated at 2 ppm (WAC 173-303-9904).

There were fluorescent light fixtures observed at 8808.2. Smoke detectors may be regulated as universal or hazardous waste and will require dismantling and special handling. Table 4 provides a summary of these items in the building:

</table>

Note: This table is not to be used without the complete survey document including appendices for additional information.

Typically, there is one ballast for every two-light tubes in a fluorescent light fixture; accordingly, there are approximately two ballasts in the light fixture requiring recycling or PCB hazardous waste disposal. There are also four four-foot tubes that will need to be recycled during demolition along individual 4-foot tubes.
PCB in Caulking and Paint

PCBs were used in paint and caulk formulations as drying oils (resins) and plasticizers or softening agents (liquids). Concrete surfaces and equipment, as well as marine or waterproofing applications may have painted surfaces containing PCBs.

PCBs were tested in representative caulking and paint on the exterior of 12031. **Table 6** below provides a summary of PCB sample results.

Mercury Containing Switches

Heating system thermostats were investigated for mercury containing systems. All the thermostats observed were electric.

Laboratory Analytical Methods

Asbestos-Containing Materials

Bulk samples were analyzed by Polarized Light Microscopy (PLM) dispersion staining EPA Method 600/R-93/116 and by 400 Point Count Analysis by Seattle Asbestos Test (SAT). SAT is accredited through the National Voluntary Laboratory Accreditation Program (NVLAP) of the U.S. Department of Commerce. This accreditation does not constitute endorsement, but rather a finding of laboratory competence. The NVLAP participant number for SAT is 200768-0 (certification copies are in Appendix D). Analytical results are in Appendix E.

Lead-Based Paint

Bulk paint chip samples were submitted to EMSL Analytical, Inc. for analysis using atomic absorption spectroscopy (AAS) to determine the presence and percentage of lead. Procedures for analyzing metals are found in the American Society of Testing and Materials (ASTM) D-3335-78 and EPA Method Manual SW-846, Method 6010. EMSL used SW 846-7000B, an equivalent analytical method.
Analytical results for paint chip results are provided in **Appendix F**. EMSL Analytical, Inc., laboratory certification is attached in **Appendix G**.

Sample and material location drawings are provided in **Appendix I**.

**PCB**

Bulk PCB samples were submitted to On-Site Environmental, Inc., for analysis using gas chromatography (GC) equipped with electron capture detectors (ECD). The samples were analyzed using EPA Method SW-846 8082A and the analytical results are provided in **Appendix H**. On-Site Environmental, Inc. laboratory certification is attached in **Appendix I**.

Sample and material location drawings are provided in **Appendix J**.
Comments and Recommendations

Asbestos-Containing Materials

MTNW recommends that this survey report be placed on-site during renovation and/or demolition and copies provided to the contractor(s) bidding and performing work. Washington Industrial Safety and Health Act (WISHA), OSHA and PSCAA require that the report be on-site and available for review during the entire project duration.

No materials containing asbestos content were found during the survey. The building was occupied at the time of the survey. A limited destructive investigation was conducted during the survey; however, additional destructive investigation will be required prior to demolition.

1. Electrical systems were not sampled due to power being live. Sample and verify that asbestos is not present prior to building demolition.
2. The doors to the structure did not appear to be fire doors with suspect asbestos content. Prior to any activity that will impact the doors, drill into the doors and door frames to determine if suspect fire protection is located inside.
3. Perform destructive investigation inside wall and ceiling cavities to verify suspect asbestos is not hidden or present prior to demolition.
4. Perform destructive investigation to verify if additional layers of flooring suspected of containing asbestos are not hidden or present prior to demolition.
5. If during demolition, pipe or pipe fitting insulation suspected of containing ACM is made visible, the material(s) must be sampled by an AHERA building inspector prior to being disturbed.

WAC 296-65 requires ACM be removed by trained and licensed contractors using certified asbestos abatement workers and supervisors (except for deregulated roofing sealants, mastics, and coatings). A 10-day prior notification is also required before abatement can begin. In addition, PSCAA requires notification and fees prior to beginning removal of friable ACM.

If additional destructive investigations uncover asbestos-containing materials, MTNW recommends third party oversight of asbestos abatement and renovation activities by an AHERA accredited building inspector to ensure regulatory compliance and completion of the additional destructive methods recommended herein.

Lead-Based Paint

Lead in painted surfaces were not detected in this building. All samples were analyzed to contain lead less than the detection of the analytical method and based on these results, the demolition waste from the building can be disposed of as general construction debris.
PCB

There were no PCB’s detected in the bulk samples collected. MTNW recommends that the asbestos abatement contractor be tasked with dismantling light fixtures, collecting all lighting ballasts for proper disposal, and recycling the light tubes. Ballasts without “No-PCB” labels are considered PCB-containing and must be disposed as a hazardous waste. “No-PCB” and Di (2-ethylhexyl) phthalate (DEHP) ballasts may designate as Washington Dangerous Waste and should be sent to an EPA licensed facility for proper disposal.

Other Hazardous Building Materials

Smoke detectors should be collected and recycled/disposed of appropriately.

Limitations

A good faith effort has been made to identify ACM, LBP and other HBM in preparation for building demolition. This survey was performed for complete demolition of the building. Additional destructive investigation and sampling will be required depending on inaccessible building systems including mechanical spaces and/or mechanical/electrical system routing.

Sampling was performed consistent with the level of care and skill ordinarily exercised by professionals currently practicing under similar conditions in the area. No other warranty, expressed or implied, is made.

This report has been prepared for the exclusive use of O’Neill Service Group and it designates for this project only. The analyses, conclusions, and recommendations presented in this report are based on conditions encountered at the time of our survey and our experience and judgment. MTNW cannot be held responsible for interpretation by others of the data contained in this report; any use of this report shall include the entire document. This survey is not intended for use as abatement plans and/or specifications which MTNW recommends for regulatory compliance.

Building and Building System Photographic Documentation
Hazardous Building Materials Survey – Totem Lake Way

Photo 1: West side of 8808.2 looking east.

Photo 2: Northwest corner of building looking east.
Photo 3: Northeast corner of building looking southwest. Wood deck patio area enclosed by a wood fence. Windows at 88008.2 have rebar over the windows internally for security purposes.

Photo 4: East side-south end of building looking west. A detached shed is located east of the building. The area is fenced off with the same metal siding that is found on the main structure.
Photo 5: Southwest corner of the building looking northeast.

Photo 6: View of entry area looking east. Office 1 is to the right and Office 2 straight ahead. To the left are the restrooms, janitors closet, and entry area office.
Photo 7: View of upper storage area in entry area facing west. The previous tenants built miniature store fronts along the upper level for decorative purposes.

Photo 8: Men’s restroom looking northwest. The women’s restroom is composed of the same building materials.
Photo 9: Office 1 – Main office area looking south.

Photo 10: Looking east into the long meeting room of Office 1 from the south end of the main office area.
Photo 11: From the north end of the long meeting room looking east down the conference room hallway. To the right is the conference room, straight ahead is a storage closet.

Photo 12: North end of conference room facing south.
Photo 13. North end of conference room looking east. The blanket on the wall is used to cover the door way that leads to the electrical room and the exit for the storage shed.

Photo 14. North end of electric room hallway facing south towards the electrical room.
Photo 15. Electric room facing south.

Photo 16. Looking east from the door of the east office space in Office 1.
Photo 17. West side of Office 2 at entrance looking northeast.

Photo 18. West side of Office 2 at entrance looking southeast.

Photo 20. North end top view of Office 2 from upper storage area facing south.
Photo 21. Upper storage area of entry way facing west.

Photo 22. Upper storage area northwest corner perimeter wall.
Photo 23. Storage area north wall above Office 2.

Photo 24. North of detached shed facing south.
Hazardous Building Materials Survey – Totem Lake Way

Photo 25. South door of shed with yellow sprayed on foam insulation.

Photo 26. South door way of shed facing southeast. Yellow foam insulation covers the interior walls and ceiling of the shed.
Photo 27. South doorway of shed facing north.

Photo 28. Southeast corner of shed, floors of the shed are bare concrete.

SAT National Voluntary Laboratory Accreditation Program Certificate
United States Department of Commerce
National Institute of Standards and Technology

NV L A P®

Certificate of Accreditation to ISO/IEC 17025:2005

NV L A P LAB CODE: 200768-0

Seattle Asbestos Test, LLC
Lynnwood, WA

is accredited by the National Voluntary Laboratory Accreditation Program for specific services, listed on the Scope of Accreditation, for:

Asbestos Fiber Analysis

This laboratory is accredited in accordance with the recognized International Standard ISO/IEC 17025:2005. This accreditation demonstrates technical competence for a defined scope and the operation of a laboratory quality management system (refer to joint ISO-ILAC-IAF Communiqué dated January 2009).

2018-10-01 through 2019-09-30
Effective Dates

For the National Voluntary Laboratory Accreditation Program

*Analysis following Lead in Paint by EMSL SOP/Determination of Environmental Lead by FLAA. Reporting limit is 0.010 % wt based on the minimum sample weight per our SOP. Unless noted, results in this report are not blank corrected. This report relates only to the samples reported above and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities. Samples received in good condition unless otherwise noted. "<" (less than) result signifies that the analyte was not detected at or above the reporting limit. Measurement of uncertainty is available upon request. The QC data associated with the sample results included in this report meet the recovery and precision requirements unless specifically indicated otherwise. Definitions of modifications are available upon request.

Samples analyzed by EMSL Analytical, Inc. Indianapolis, IN AIHA-LAP, LLC--ELLAP 157245, OH E10040

GWB = gypsum wallboard, ppm = parts per million. **Bolded values** – bulk paint chip samples with lead detected above the laboratory reporting limit have been bolded. The Washington Industrial Safety and Health Administration (WISHA) worker protection regulations have stated that lead at any detectable concentration shall be considered regulated (Washington Administrative Code [WAC] 296-155-176, Lead).

EMSL Analytical, Inc. Laboratory
Certifications
AIHA Laboratory Accreditation Programs, LLC

acknowledges that

EMSL Analytical, Inc.
6340 Castleplace Drive, Indianapolis, IN 46250
Laboratory ID: 157245

along with all premises from which key activities are performed, as listed above, has fulfilled the requirements of the AIHA Laboratory Accreditation Programs (AIHA-LAP), LLC accreditation to the ISO/IEC 17025:2005 international standard, General Requirements for the Competence of Testing and Calibration Laboratories in the following:

LABORATORY ACCREDITATION PROGRAMS

✓ INDUSTRIAL HYGIENE  Accreditation Expires: June 01, 2019
✓ ENVIRONMENTAL LEAD  Accreditation Expires: June 01, 2019
✓ ENVIRONMENTAL MICROBIOLOGY  Accreditation Expires: June 01, 2019
☐ FOOD  Accreditation Expires:
☐ UNIQUE SCOPES  Accreditation Expires:

Specific Field(s) of Testing (FoT)/Method(s) within each Accreditation Program for which the above named laboratory maintains accreditation is outlined on the attached Scope of Accreditation. Continued accreditation is contingent upon successful on-going compliance with ISO/IEC 17025:2005 and AIHA-LAP, LLC requirements. This certificate is not valid without the attached Scope of Accreditation. Please review the AIHA-LAP, LLC website (www.aihaaccreditedlabs.org) for the most current Scope.

William Walsh, CIH
Chairperson, Analytical Accreditation Board

Cheryl O. Morton
Managing Director, AIHA Laboratory Accreditation Programs, LLC

Revision 15: 03/30/2016  Date Issued: 05/31/2017
The laboratory is approved for those specific field(s) of testing/methods listed in the table below. Clients are urged to verify the laboratory’s current accreditation status for the particular field(s) of testing/Methods, since these can change due to proficiency status, suspension and/or withdrawal of accreditation.

The EPA recognizes the AIHA-LAP, LLC ELLAP program as meeting the requirements of the National Lead Laboratory Accreditation Program (NLLAP) established under Title X of the Residential Lead-Based Paint Hazard Reduction Act of 1992 and includes paint, soil and dust wipe analysis. Air and composited wipes analyses are not included as part of the NLLAP.

### Environmental Lead Laboratory Accreditation Program (ELLAP)

**Initial Accreditation Date:** 09/01/2002

Re: Analytical Data for Project 8808.2  
Laboratory Reference No. 1811-194

Dear Jon:

Enclosed are the analytical results and associated quality control data for samples submitted on November 21, 2018.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

[Signature]

David Baumeister  
Project Manager

Enclosures
Date of Report: November 28, 2018
Samples Submitted: November 21, 2018
Laboratory Reference: 1811-194
Project: 8808.2

Case Narrative

Samples were collected on November 14, 2018 and received by the laboratory on November 21, 2018. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.
This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Data Qualifiers and Abbreviations

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
B - The analyte indicated was also found in the blank sample.
C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
E - The value reported exceeds the quantitation range and is an estimate.
F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
I - Compound recovery is outside of the control limits.
J - The value reported was below the practical quantitation limit. The value is an estimate.
K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
L - The RPD is outside of the control limits.
M - Hydrocarbons in the gasoline range are impacting the diesel range result.
M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
N - Hydrocarbons in the lube oil range are impacting the diesel range result.
N1 - Hydrocarbons in diesel range are impacting lube oil range results.
O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
P - The RPD of the detected concentrations between the two columns is greater than 40.
Q - Surrogate recovery is outside of the control limits.
S - Surrogate recovery data is not available due to the necessary dilution of the sample.
T - The sample chromatogram is not similar to a typical ____________.
U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
U1 - The practical quantitation limit is elevated due to interferences present in the sample.
V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
X - Sample extract treated with a mercury cleanup procedure.
X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.
Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
Z -
ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

Subject: Destructive Investigation Survey Update
12031 Northeast Totem Lake Way
Kirkland, Washington
Med-Tox Northwest Proposal No. 8808.2Arev

Dear Vance:

On April 2, 2019 and May 9, 2019, Anthony Fullerton, Eric Jarvis and Jason Carlson of Med-Tox Northwest (MTNW) conducted a follow-up survey to address the limitations identified in the Hazardous Building Survey Report dated December 2018 for 12031 Northeast Totem Lake Way in Kirkland, Washington. The initial survey for the building was conducted on November 14, 2018.

As required by Washington Administrative Code (WAC) 296-62-077 and Puget Sound Clean Air Agency (PSCAA) Regulation III, Article 4, an Asbestos Hazard Emergency Response Act (AHERA) accredited building inspectors performed the survey. Copies of the inspectors AHERA building inspector certificates are attached.

As part of this investigation, MTNW performed the following:

1. Drilled into the doors and door frames to determine if suspect fire protection was located inside.
2. Performed destructive investigation inside wall and ceiling cavities to verify suspect asbestos was not hidden or present.
3. Performed destructive investigation to verify if additional layers of flooring suspected of containing asbestos were not hidden or present.
4. Inspected and sampled the roof and systems found on the roof for asbestos.
5. Inspected and sampled electrical systems.

There were twelve homogenous materials (HM) identified during the follow-up surveys. From these twelve materials, twenty-six samples were collected and sent in for laboratory analysis. There were two materials determined to be asbestos-containing by polarized light microscopy (PLM) analysis. Black sealant on the heating, ventilation and air conditioning (HVAC) ductwork (HM-02) was found to contain 3% - 4% Chrysotile asbestos. Gray sealant on ductwork (HM-04) was found to contain 3% Chrysotile asbestos.
Photographic documentation of the asbestos-containing materials is attached. For a complete listing of suspect materials sampled please refer to Table 1 below.

</table>
CHR = Chrysotile asbestos, HM = homogeneous material, HVAC = heating, ventilation and air conditioning, ND = None detected.

Bulk samples were analyzed by PLM dispersion staining U.S. Environmental Protection Agency (EPA) Method 600/R-93/116 by Seattle Asbestos Test, LLC. (SAT). SAT is accredited through the National Voluntary Laboratory Accreditation Program (NVLAP) of the U.S. Department of Commerce. This accreditation does not constitute endorsement, but rather a finding of laboratory competence (certification copy is attached).

Table 2 summarizes asbestos containing materials identified in the building surveyed by MTNW. Friability was determined by conditions observed during the survey and by how the material behaves during mechanical demolition.

¹ Material quantity is approximate.
COMMENTS AND RECOMMENDATIONS

The asbestos-containing materials identified in Table 2 must be removed by a certified abatement contractor prior to demolition or renovation activities that may disturb the materials.

A good faith effort has been made by Med-Tox Northwest to identify hazardous materials, which could be impacted during the renovation and/or demolition process.

Although not expected, additional suspect materials may become visible during the renovation and/or demolition process. If additional suspect materials become visible, they must be sampled by an AHERA building inspector, analyzed by an accredited laboratory and determined to be negative for asbestos prior to any activities that will impact them. If determined to be asbestos-containing they must be removed by a certified asbestos-abatement contractor.

WAC 296-65 requires asbestos-containing material (ACM) be removed by trained and licensed contractors using certified asbestos abatement workers and supervisors (except for deregulated roofing sealants, mastics, and coatings). A 10-day prior notification is also required before abatement can begin. In addition, PSCAA requires notification and fees prior to beginning removal of friable ACM.

MTNW recommends that this survey report be placed on-site during renovation and/or demolition process and copies provided to the contractor(s) bidding and performing work. Washington Industrial Safety and Health Act (WISHA), Occupational Safety and Health Administration’s (OSHA) and PSCAA require that the report be on-site and available for review during the entire project duration.

If you have any questions or need additional information, please contact us at (253) 351-0677.

Sincerely,

Eric Jarvis

Attachments
Photo 1: Black sealant on HVAC duct with 3-4% Chrysotile asbestos – Roof.

Photo 2: Gray sealant on duct with 3% Chrysotile asbestos – Roof.
Enclosed please find the test results for the bulk samples submitted to our laboratory for asbestos analysis. Analysis was performed using polarized light microscopy (PLM) in accordance with Test Method US EPA 600/R-93/116.

Percentages for this report are done by visual estimate and relate to the suggested acceptable error ranges by the method. Since variation in data increases as the quantity of asbestos decreases toward the limit of detection, the EPA recommends point counting for samples containing between <1% and 10% asbestos (NESHAP, 40 CFR Part 61). Statistically, point counting is a more accurate method. If you feel a point count might be beneficial, please feel free to call and request one.

The test results refer only to the samples or items submitted and tested. The accuracy with which these samples represent the actual materials is totally dependent on the acuity of the person who took the samples. This report must not be used by the client to claim product certification, approval, or endorsement by Seattle Asbestos Test, LLC, NVLAP, NIST, or any agency of the Federal government. The test report or calibration certificate shall not be reproduced except in full, without written approval of the laboratory.

This report is highly confidential and will not be released without your consent. Samples are archived for 30 days after the analysis, and disposed of as hazardous waste thereafter.

Thank you for using our service and let us know if we can further assist you.

Sincerely

Zhang

Enclosed please find the test results for the bulk samples submitted to our laboratory for asbestos analysis. Analysis was performed using polarized light microscopy (PLM) in accordance with Test Method US EPA/600/R-93/110.

Percentages for this report are done by visual estimate and relate to the suggested acceptable error ranges by the method. Since variation in data increases as the quantity of asbestos decreases toward the limit of detection, the EPA recommends point counting for samples containing between <1% and 1% asbestos (NESHAP, 40 CFR Part 61). Statistically, point counting is a more accurate method. If you feel a point count might be beneficial, please feel free to call and request one.

The test results refer only to the samples or items submitted and tested. The accuracy with which these samples represent the actual materials is totally dependent on the acuity of the person who took the samples. This report must not be used by the client to claim product certification, approval, or endorsement by Seattle Asbestos Test, LLC, NVLAP, NIST, or any agency of the Federal government. The test report or calibration certificate shall not be reproduced except in full, without written approval of the laboratory.

This report is highly confidential and will not be released without your consent. Samples are archived for 30 days after the analysis, and disposed of as hazardous waste thereafter.

Thank you for using our service and let us know if we can further assist you.

Sincerely,

Steve (Fanyeo) Zhang
President

NVLAP®

Certificate of Accreditation to ISO/IEC 17025:2005

NVLAP LAB CODE: 200768-0

Seattle Asbestos Test, LLC
Lynnwood, WA

is accredited by the National Voluntary Laboratory Accreditation Program for specific services, listed on the Scope of Accreditation, for:

Asbestos Fiber Analysis

This laboratory is accredited in accordance with the recognized International Standard ISO/IEC 17025:2005. This accreditation demonstrates technical competence for a defined scope and the operation of a laboratory quality management system (refer to joint ISO-ILAC-IAF Communiqué dated January 2009).

2018-10-01 through 2019-09-30
